## System of National Accounts 2008

**GDP** – is one of the most important indicators of the System of National Accounts, characterizing the final result of the production activity of resident economic units, which is measured by the value of goods and services produced by these units for final use.

**GDP**

**The index of physical volume (real growth rates) of GDP** is calculated as the ratio of the GDP of the reporting period, calculated at constant prices, i.e. in prices of the corresponding period of the previous year (real GDP) to GDP in current prices of the corresponding period of the previous year.

**The GDP deflator index** characterizes the average change in prices in the economy and is calculated as the ratio of nominal GDP (GDP of the reporting period at current prices) to real GDP.
