IV. Methodological notes

When forming statistical indicators of wholesale and retail trade turnover, regulatory legal acts of the Republic of Uzbekistan regulating the activities of wholesale and retail trade enterprises and organizations, as well as international manuals and recommendations such as "System of National Accounts 2008 (SNA-2008)," "International Recommendations on Retail and Wholesale Trade Statistics" (UN, 2008), "Methodological recommendations for statistical observation of retail trade turnover and calculation of its physical volume index" (Statistical Committee of the CIS, 2011) were used.

Statistics of wholesale and retail trade turnover are calculated taking into account the results of the statistical assessment of the informal and non-observed economy.

In some cases, small differences between the final value and the sum of the addends are explained by the rounding of the data.
